

CHRISTAL BALL SOFTWARE BY WINEWARE CONSULTING

CHRISTAL BALL SOFTWARE IS A FORECASTING TOOL THAT ALLOWS YOU TO REACH FUTURE SALES AND PRODUCTION TARGETS BY HELPING YOU TO MAKE THE CORRECT DECISIONS TODAY.

Christal Ball is the answer for any discerning wine business that struggles to marry supply and demand. Christal Ball allows you to optimise your business capacity while taking the current world market into consideration.

This software package gives you the ability to input sales targets per market for up to seven years in advance. You then have the ability to try out a range of different scenarios and variables, in order to make an informed decision. You can also project desired market share and current market strategy, and tailor your actions accordingly.

The system then analyses your current situation and guides you through the changes that need to be implemented with regards to vineyard production, winery production times, currency fluctuations, expected yields, inflation rates per market, and a whole range of other variables to reach your desired production, market and Profit aspirations.

Christal Ball software can harvest relevant information from your current databases, so that you don't need to input all information from scratch.

see the future

NOW

order additional 22 wine barrels

plant 6 hectares of new vineyards

buy new tractor

order 50 000 wine bottles
